PROFESSIONAL SUMMARY

Software Engineer with 10+ years of professional experience in software development, complemented by 3 years of hands-on React experience through freelance and small-business projects. Experienced in building web interfaces, business applications, and REST API integrations, with a strong backend foundation in PHP, Go, .NET, SQL Server, and MySQL. Currently expanding my experience with TypeScript while focusing on modern Front-End development with React.

EDUCATION

BINA SARANA INFORMATIKA UNIVERSITY - Jakarta, Indonesia

(June, 2018 – January, 2022)

[Diploma Of Information System](#), GPA: 3.36 / 4.00

WORKING EXPERIENCES

Sales Engineer & Software Developer, PT. Kyoritsu Electric Indonesia

(January, 2020 – Now)

Professional Summary

A Sales Engineer & Software Developer combines technical consulting, customer engagement, and software development expertise to deliver complete business solutions. This role is responsible for understanding customer requirements, proposing technical solutions, developing software applications, and ensuring successful project implementation.

Key Responsibilities

Pre-Sales Activities

- Conduct customer meetings and requirement analysis.
- Perform site surveys and workflow assessments.
- Design solution concepts and system architecture.
- Prepare technical proposals and project estimations.
- Present solutions to customers and stakeholders.

Development Activities

- Design databases and application structures.
- Develop desktop, web, and mobile applications.
- Developed and integrated 15+ REST APIs connecting production, inventory, and reporting systems, reducing manual data entry by 80%.
- Develop reporting and monitoring systems.
- Implement barcode, QR code, and automation solutions.

Post-Sales Activities

- Deploy software solutions.
- Provide training and technical support.
- Troubleshoot system issues.

- Gather feedback and implement improvements.
- Maintain long-term customer relationships.

PT. Axis ITSolution Indonesia

(September, 2014 – December, 2019)

Software Developer & Technical Solution Engineer

- Analyze business requirements and translate them into technical solutions.
- Design and develop desktop applications using VB.NET and web-based applications using PHP.
- Design, implement, and maintain Microsoft SQL Server and MySQL databases.
- Develop and integrate RESTful APIs for communication between internal and external systems.
- Create production monitoring, inventory management, and business process automation systems.
- Develop barcode and QR Code solutions to support manufacturing and operational processes.
- Collaborate with customers and internal stakeholders to gather requirements and propose effective solutions.
- Led testing and deployment of manufacturing applications used by 100+ users across multiple departments, reducing system downtime by 30%.
- Prepare Software Detail Documentation (SDD) including system architecture, database structure, business process flow, and technical specifications.
- Create User Manuals and Work Instructions to support system implementation, training, and operational activities.
- Provide technical training and user support to ensure successful system adoption.
- Participate in project planning, estimation, and solution presentations for customers.

FREELANCE & INDEPENDENT PROJECTS

Front-End / React Developer | Freelance & Small Business Projects (MSMEs)

(2023 – Present)

- Develop web applications using React for small businesses and independent projects.
- Build responsive and reusable UI components for business workflows and data management.
- Integrate React front-end applications with REST APIs and backend services.
- Develop dashboards, CRUD interfaces, forms, reporting views, and other business-oriented features.
- Work directly with small business users to understand requirements and translate operational needs into software features.
- Maintain and improve applications based on user feedback and changing business requirements.

ADDITIONAL INFORMATION

Skills:

Programming Languages

- VB.NET
- PHP
- Go (Golang)
- SQL

Desktop Application Development

- Windows Desktop Application Development

- Enterprise Internal Systems
- Manufacturing Systems
- Data Collection & Monitoring Applications
- Hardware Integration

Web Development

- PHP Web Application Development
- REST API Development
- Database Driven Applications
- Internal Business Applications

Front-End Development

- React — 3 years
- JavaScript
- TypeScript — 6 months
- HTML5 / CSS3
- Responsive Web Development
- REST API Integration
- Component-Based UI Development

Database & Data Management

- Microsoft SQL Server
- MySQL / MariaDB
- Database Design
- Query Optimization
- Stored Procedures
- Data Migration
- Reporting Systems

System Analysis & Documentation

- Software Requirement Analysis
- System Design
- Business Process Analysis
- Software Detail Documentation (SDD)
- User Manual & Instruction Manual Creation
- Technical Documentation

Manufacturing & Industrial Systems

- Production Monitoring Systems
- Production Planning Systems
- QR Code Systems
- Barcode Systems
- Shop Floor Data Collection
- Inventory & Stock Monitoring
- Production Progress Tracking

Integration & Connectivity

- REST API Integration
- Third-Party System Integration
- Hardware Communication
- Network Troubleshooting
- SQL Server Connectivity
- Data Exchange Systems

Development Tools

- Visual Studio
- VS Code
- SQL Server Management Studio (SSMS)
- Git (basic/intermediate)

- Additional Skills
- AI-Assisted Development Tools (ChatGPT, Codex)
 - Problem Solving
 - System Troubleshooting
 - Technical Support
 - Client Requirement Gathering
 - Project Implementation
 - User Training

Certification:

1. [PHP Developer](#), W3School, 24 July 2020
2. [Preparation of PMP](#), udemy.com, 11 Feb 2021
